

DOMAINE CHANDON GREEN SHEET

Chandon is committed to sustainability in its vineyards and winery. As a result of the stringent standards it adheres to, Chandon has had each of its estate vineyards certified by Napa Green Certified Land and its winery certified by Napa Green Certified Winery.

Chandon's most prominent sustainability efforts include:

IN THE VINEYARDS

Conserving water. We monitor the water content in the soil and vines, allowing parsimonious use of our precious water resources. Our vineyards are irrigated almost entirely by reclaimed or collected water.

Enhancing the watershed. We use cover crops, terrace design and diversion inlets that are engineered to prevent erosion and be compliant with our green certifications.

Reducing or eliminating chemical use. We rely on owl boxes, cover crops and insect detection to keep the ecology of the vineyards in balance.

Restoring wildlife habitat. We embellish waterways with native vegetation, maintain wildlife corridors, preserve forested areas in the vineyard and employ clean water protection to encourage fish habitat and spawning.

IN THE WINERY

Conserving water and energy. We use state-of-the-art equipment, including an Electrodialysis, that saves enough energy per year to provide power for 55 homes.

Reducing waste. We have installed a custom piece of equipment for our bottling line that separates the crown cap from the bidule, allowing us to recycle eight tons of metal and three tons of plastic per year. With this new equipment we now recycle all waste materials from production.

Reducing our carbon footprint. We have reached beyond the production area of the winery to reduce waste, separating the corks, cages, and caps in our visitor center for proper recycling.
